

MOULDINGS AND PANELS

WWW.LISTATALO.FI

Listatalo Ltd

Listatalo Ltd, founded in 1978, is a company that manufactures mouldings and panels, specialising in wood surface treatment.

Listatalo mouldings and panels are manufactured using only the highest quality raw materials. The mouldings and panels are made either of wood or MDF.

MDF boards are produced in a dry process. The material used is exclusively wood acquired from raw material saved from forest thinning. MDF boards are mainly pine or

spruce that is refined into fibres. A small amount of adhesive is added to the fibres before pressing them into boards.

VISION

Listatalo offers the most versatile moulding and panel solutions and the best user experience for professional builders and consumers.

Listatalo delivers customer-orientated, high quality moulding and panel solutions both in Finland and selectively in the Baltic countries.

VALUES

- Customer satisfaction
- Continuous Improvement
- Profitability
- Team effort
- Integrity

CUSTOMER PROMISE

- 100% quality
- Our operation satisfies customer expectations

Good to know

Listatalos's surface treated mouldings and panels are designed for timesaving and effortless installation. Our products give your home a finished, impeccable look.

Spruce fibres are light yellowish brown, often rather white.

The spruce panel is finished with white, translucent lacquer coating that lightens and freshens up the spruce's shade while maintaining

the true look and pattern of the wood. The finishing treatment brings benefit by slowing down the yellowing process and protecting from dirt.

The machine handling of spruce wood panels at the factory ensures an even surface quality. A spruce wood panel may characteristically include: knots and a rough planing surface due to them plus knotholes

The interlocking wood panels can be nailed or mounted with special fixings.

When mounting wider panels, special attention should be given to ensure that the moisture content of the panels is close to the final equilibrium moisture content. A separated interlock or a split board is difficult to fix.

Technical specifications

WHITE COLOUR

For white products we use paint shade NCS S 0502-Y.
For small repairs we recommend a semi-dull furniture paint.

ATTENTION!
White colour

PRODUCT NUMBERS AND MEASUREMENTS

The products in our brochure are listed by product numbers. You will find the product measurements, colour and finish treatment under the product number.

321-00	Product number
12x16	Measurements: width x height
mänty lakattu	Colour
L 3300	Length

For heavy duty use, in places where mouldings are easily scratched and dented, we recommend mouldings made of MDF boards. It is harder than traditional wood and thus more impact resistant. In addition, products made of MDF are knot free so the moulding surface is always smooth.

Mouldings with cable grooves hide, for example, electric and cable wires neatly.

Base mouldings come with a finished wide front and one finished narrow side.

The lower edge of the base mouldings is slanting. Due to the slanting edge, the moulding fits tightly to the floor leaving no unnecessary gaps on the floor level. The possible gap left between the upper edge and the wall is finished with a sealing and seaming paste.

The walls and ceiling of the sauna are usually finished with spruce panel (not pine due to its resin).

A mitre set makes laying the door moulding easy. Saw the extra length away from the lower vertical moulding and install the moulding to your standard door module.

Choosing a moulding

When choosing a wider moulding, it is good to check that the mouldings fit in the planned places. Take into consideration the position of the light switch in relation to the doorframe, the space between the windows and the height of the plugs from the floor.

Corner blocks

white upper

With white antique mouldings, we recommend you to use the beautiful corner blocks on the door corners. The corner blocks make the installation easier and the corners need not be mitred.

The ornamented corner blocks in the upper and lower corners of the door bring an air of dignity to your door.

Today there are several MDF panel designs. They are often painted white or melamine coated and they also have a tongue and groove at both ends.

The MDF panel is of uniform quality and it is easy to install. It is best attached with a pneumatic finish nail gun. In MDF panels, the lower part of the groove is usually designed long enough in order to completely and easily hide the nails when installing.

MDF panels can be used in every room of your home except for rooms with high amounts of moisture. They are therefore not suitable for bathrooms and saunas. Due to their dense structure, they are ideal for ceiling heating, because the dense material stores heat and withstands the high temperatures of ceiling heating. The melamine coated MDF panel is not suitable for ceiling heating.

PEFC CERTIFICATE

(Programme for the Endorsement of Forest Certification schemes)

Finnish timber is usually certified timber, which guarantees that it is ecologically sound. In its timber procurement, Listatalo Oy aims to use only vendors whose timber origin tracing is in order. Listatalo uses the PEFC certificate, or the timber origin tracing system.

CE MARKING
(Conformité Européenne)

The CE marking is the manufacturer's statement that the product meets the applicable European Union requirements and that the product has undergone all mandatory tests and checks. With the CE marking, the manufacturer of the product or an authorised representative notifies the authorities that the product meets the essential safety requirements of the directives. The marking is not voluntary but must be on the products if the directive applicable to the product so requires.
